

Sovereign AI Workbench

Sovereign On-Premise Agentic AI Workbench using Open-Weight Multimodal LLMs for Confidential Industrial Work

Ask about your documents, or give 4CE a task

7

4CE / TONY (Orchestrator)

TEAM KERN · 4CE (ACE)

OUR SOLUTION

Four pillars, one workbench.

Sovereignty

Local LLMs → data stays inside

Ingestion

Legacy files → usable intelligence

Governance

Tool execution → human approval

Trust

Generated answer → source-verified

WHY DIFFERENT

Safe by design.

Isolated sandbox execution

AI-generated code → isolated environment → controlled execution.

SANDBOXED EXECUTION

```
--network none
--read-only
--cap-drop ALL
```

Exit code: 0

Centralised AI control

Every action → control layer → authorization → execution.

EVERY ACTION, IN ORDER

TONY FRIDAY JARVIS ULTRON YOU

Type approve | Withhold | Approve

Sensitive actions → mandatory human approval

Model-independent architecture

Runs Qwen, Gemma, Mistral or other open-source models.

4CE / TONY (Orchestrator)

- Qwen ✓
- Gemma
- Mistral
- Other open-source models

Change the model, not the architecture.

TECHNICAL APPROACH

Built on an open, local stack.

Tech stack

Language & runtime	Python · Bash
Application platform	FastAPI · Uvicorn · Socket.io · SvelteKit · JWT session auth
AI / ML	Bionic · Qwen models · Gemma models · nomic-embed-text-v1.5
Data & storage	SQLite · ChromaDB
Execution & isolation	Docker · Hardening flags
Document generation	python-docx
Deployment & tooling	Custom test harness

PROTOTYPE

75%+

of the prototype is already built

Multi-LLM-Agentic-Ai

FEASIBILITY · RISK ASSESSMENT & MITIGATION

Every risk, answered.

RISK		MITIGATION
Cloud dependency Data could leave the enterprise	→	Local-only stack + outbound paths disabled ✓
65K context window KV cache exceeded 6 GB VRAM → CPU fallback → 20+ min inference	→	8K context fits VRAM → GPU inference restored ✓
AI hallucination Generated findings could be incorrect	→	ULTRON verification + bounded replan ✓
Generated-code risk AI code could reach the host or network	→	Hardened Docker sandbox → isolated execution ✓

What it takes, what it pays.

RESOURCE REQUIREMENTS

- **Local compute + GPU (recommended)**
- **Docker + local model server**
- **Persistent storage + enterprise data**
- **Proven frameworks**

ECONOMIC APPROACH

Lower recurring AI costs

Potentially lower costs for sustained, high-volume workloads

Enterprise licensing

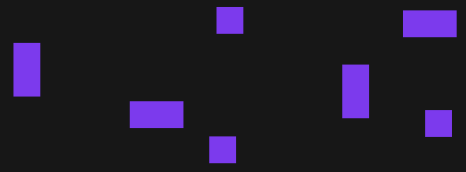

Monetised through licensing plus setup and integration

Recurring revenue

Support, maintenance and custom agents

IMPACT & BENEFITS · A SAFER TOMORROW

Real value, higher control.

01

Conversational impact

- Safer AI interactions
- Human oversight

02

Faster research

- Private AI research
- Controlled experimentation

03

National impact

- AI & data sovereignty
- Reduced external dependence

04

Technical impact

- Local LLM + RAG
- Multi-agent orchestration
- Sandbox + verification
- Auditability

05

Economic & industrial impact

- Lower recurring AI costs
- Secure enterprise adoption
- Regulated industries

FUTURE PROSPECTS

From workbench to control layer.

01

Multimodal enterprise AI

Vision, audio, video & complex-document understanding

02

Multi-site deployment

Local AI at every site with centralised governance

03

Industry-specific agents

Manufacturing, healthcare, finance, government & defence

04

Continuous security & governance

Policy enforcement, monitoring, audit & compliance

05

Enterprise AI control layer

Evolve into the secure orchestration and governance layer for enterprise AI

RESEARCH & REFERENCES

Grounded in research.

SUPPORTING RESEARCH PAPERS

- Attention Is All You Need
- Retrieval-Augmented Generation for Knowledge-Intensive NLP Tasks
- Self-Refine: Iterative Refinement with Self-Feedback
- AutoGen: Next-Gen LLM Applications via Multi-Agent Conversation

TECHNICAL DOCUMENTATION

- Sovereign AI Project Deep Research
- Master Architecture + Phase Specifications
- Verification Reports + Security Runbooks
- RUNNING.md + Sovereign Configuration

4CE

Your data stays yours.

Sovereign. Secure. Verifiable. Actionable.

- Turns private organisational knowledge into actionable intelligence
- Automates real workflows while keeping humans in control

Powerful enough for enterprises. Controlled enough to trust.

THANK YOU · TEAM KERN · 4CE (ACE)
